

Joint Response, Awareness and Prevention Through Strategic Partnership in Emergency Situations

RISK PREVENTION

Interreg  Co-funded by the European Union
NEXT Romania – Ukraine

The problem. Project's solution

Both Sarasău (RO) and Solotvyno (UA) face growing risks from floods, fires, and landslides caused by climate change and inadequate prevention infrastructure. The project strengthens resilience by providing modern firefighting equipment, improving preparedness, and promoting active community involvement. It also enhances cross-border cooperation through joint training, updated risk strategies, and a shared communication platform—ensuring faster, more coordinated, and sustainable responses to natural and man-made disasters.
