

Emergency care for children of cross-border region. Neurosurgical focus.

HEALTH

Neuro kids

The problem. Project's solution

The Chernivtsi–Suceava region faces low investment in public health infrastructure, outdated equipment, and limited neurosurgical training.

The project addresses these issues by equipping hospitals with modern equipment and technology for emergency neurosurgical care, and organizing specialized training for medical staff. It also fosters long-term cross-border cooperation and builds hospitals' capacity to better respond to medical needs and external challenges in the border region.
