GOVERNANCE

Digital City Hall – Services Closer to Citizens

The problem. Project's solution

Outdated IT infrastructure, fragmented administrative practices, and limited cross-border cooperation continue to hinder efficient, transparent, and citizen-centred public services in municipalities along the Romania–Ukraine border. These gaps are particularly evident in under-resourced communities with limited digital capacity. The project addresses these challenges by modernizing digital infrastructure, strengthening institutional skills, developing a joint digital transformation strategy, and creating a coordinated framework for interoperable, inclusive, and resilient cross-border public administration.
